

FIFTH GEAR

Wheel & Tire Care and Warranty Information

Failure to follow these instructions will void the warranty and may be unsafe

Consumer Information

- We recommend you retighten your new lug nuts and wheel locks after the first 25 miles and monthly thereafter. Fifth Gear will perform this service at **NO CHARGE**.
- Tire pressure must be checked once a month. You may not be able to tell visually when a low profile tire needs air. Fifth Gear will check your air pressure anytime for **FREE**.
- Tires must be rotated at least once every 6,000 miles. Rotating tires promotes good tire wear and also allows for tires to be inspected. Call Fifth Gear to set an appointment.
- Tires have no **MILEAGE** or **ROAD HAZARD** Warranty (unless purchased separately from Fifth Gear). Excessive wear on inside/outside edge of tires is caused by poor vehicle alignment and is not covered under warranty.
- The vehicles alignment must be checked on an alignment machine at least once every 6 months. If your vehicle has not been aligned recently you should have it checked **IMMEDIATELY**. A vehicle out of alignment can cause excessive premature tire wear and possibly tire failure.
- Custom wheels must be washed **WEEKLY** with a mild detergent. Do not use harsh chemicals or abrasives when cleaning wheels. **WARNING: Most car washes use harsh chemicals which can damage the finish on your wheels. Damage to the finish resulting from chemicals, climate conditions or neglect is not covered by the wheel warranty.**
- Wash wheels after they have sufficiently cooled. **NEVER ATTEMPT TO CLEAN A HOT WHEEL**. Doing so can damage your wheels and is not covered by the wheel warranty.
- **Fifth Gear recommends applying TOP COAT sealant every 3 to 6 months to protect the finish and extend the life of your wheels.**
- A special socket is normally required to remove custom wheels. Make sure this socket is kept in the vehicle at all times. You will need this socket if you have a flat tire, require brake service, etc.
- Most aftermarket wheels are custom fit to the vehicle using a hub centric ring. The ring is usually black in color and **MUST** be removed before installing the spare tire. Failure to remove the ring may cause the spare to loosen while driving and come off the vehicle.
